

Ruterana Gloire

Software Engineer & Full-Stack Web Developer & IT Consultant

Kigali, Rwanda · ruterana47@gmail.com · linkedin.com/in/ruterana-gloire-06a904423 · github.com/aldoglory

PROFILE

Final-year Software Engineering student at the Adventist University of Central Africa (AUCA), working toward a Bachelor of Information Technology with Honours. Skilled across full-stack web development, databases, software testing & QA, and workflow automation — building things end to end and reasoning through problems methodically rather than guessing. Also consults remotely on IT projects and takes on freelance web work alongside coursework.

EXPERIENCE

Software Development Intern

Rwanda Airports Company (RAC) · Internship

Worked alongside the development team on internal software tasks, gaining hands-on experience with how a real engineering team builds and maintains applications — from writing and debugging code to turning requirements into working features in a production environment. Built an email automation system that removed manual, repetitive sending and formatting from the team's workflow.

IT Consultant & Developer (Volunteer, Remote)

Osteopaths Without Borders · Ongoing

Volunteering remotely as an IT consultant and developer, supporting the organization's technology needs and building software solutions that help the team run more efficiently as they deliver care.

SELECTED PROJECTS

Adaptive Traffic Light Simulation — Python, SUMO, TraCI

Final-year project comparing a fixed-timer traffic system against a density-based adaptive algorithm, with a priority system that can grant precedence to emergency vehicles.

Mental Health Support System — Java, Spring Boot, MySQL

Backend-focused academic project with a Spring Boot API and MySQL database, designed to reliably manage user data and support content.

Email Automation System — Python, APIs, Scripting

Built during the RAC internship to automate recurring email workflows — templating, scheduling, and reliable delivery of routine communications.

Emma Tranier — Practitioner Website — HTML, CSS, JavaScript

Freelance multi-page website for a manual osteopathic practitioner in Kingston, Ontario, built framework-free with a consistent design system across pages.

EDUCATION

Bachelor of Information Technology (Honours), Software Engineering

Adventist University of Central Africa (AUCA) · 2022 — Present

Software Development

Secondary school studies

SKILLS

Languages	HTML, CSS, JavaScript, Java, Python, PHP, SQL, PL/SQL, C, C++
Frontend	React, Vue.js, Vite, Pinia, Tailwind CSS
Backend	Node.js, Spring Boot, JDBC, Maven
Databases	MySQL, Oracle, MongoDB
Tools	Git, GitHub, Docker, Power BI, WordPress, Linux
Testing & QA	Test Planning, Test Case Design, Defect Tracking, Traceability Matrices
Automation	Workflow Automation, Email Automation, Scripting, API Integration
